Waterpik Cordless Select Water Flosser dealsWaterpik recently introduced its latest oral care product - the Waterpik Cordless Select Water Flosser. It's a compact and more flexible option than the brand's more traditional 'Professional' water flossers, which need to be plugged in and sit on a bathroom countertop.It's also a more advanced version of the Waterpik Cordless Plus Water Flosser, as it features a more streamlined design, magnetic four-hour rapid charging system, ultra-quiet operation and global voltage, which should be useful if you like to floss while travelling.The question is, though, is the Waterpik Cordless Select Water Flosser any good? Well, we've been hosing down our gums for a few weeks now to find out.Waterpik Cordless Select Water Flosser review: designThe Waterpik Cordless Select looks pretty good for a water flosser - it's certainly cleaner and more modern looking than the rest of Waterpik's cordless lineup. I'd quite happily leave this out on my bathroom shelf as it looks right at home next to the more recent, and also stylish, Philips Sonicare electric toothbrushes.Of course, the main reason you'll be interested in this cordless flosser is that it's lightweight, portable, and easy to store if you don't want your oral care gadgets on display all of the time.It weighs just 336g, so you can even take this travelling if you wanted to.The front of the Select is very smooth, but the rear of the handle section has raised dimples which make it easy to grip when it's wet.The power button is conveniently located on the grip, making it easy to operate.The reservoir is easy to fill without making too much mess and holds 207 ml of water. This provides 45 seconds of flossing time.The water reservoir is a really intelligent shape which means pretty much all of the water can be sucked out using the flosser pump. It can also be removed to clean, if necessary.The Waterpik Cordless Select Water Flosser comes with 4 tips that can rotate 360-degrees to reach all areas of the mouth. The tips include an Orthodontic Tip for braces and general use, a Plaque Seeker Tip which can be used for implants, crowns, bridges, and retainers; and two Classic Jet Tips.It's even fully waterproof, so you can water floss in the shower - if that's your thing.(image credit: Waterpik)Waterpik Cordless Select Water Flosser review: PerformanceUsing the Waterpik Cordless Select Water Flosser is easy, simply lean over the sink, Aim the tip at a 90-degree angle to gumline, and turn the unit on. A constant stream of water will start to jet out and you glide tip along the gumline and pause briefly between teeth. Waterpik recommends you start at the back teeth first, then move towards the front, and keep the unit upright during use for best results.It can be slightly messy the first few times you use the device, but if you slightly close lips to avoid splashing but allow water to flow freely from your mouth into the sink then it's not too bad.There are two settings, a low-pressure (45PSI) setting to target sensitive gums or a high-pressure (75 PSI) setting to achieve a deeper clean.When using both settings the device is surprisingly quiet.I found using the Waterpik Cordless Select Water Flosser leaves my mouth feeling incredibly fresh and clean, almost like my gums have been massaged. It's certainly great at removing food debris too, as I find it often dislodges particles that were missed during brushing. As for removing plaque, that's more difficult for me to quantify until I've visited the dentist. Waterpik claims if used daily, the Waterpik Cordless Select Water Flosser will remove plaque and debris deep between the teeth and below the gumline where brushing can't reach.I found it really useful around a bonded retainer on my lower incisors, as it's traditionally an area where manual flossing can't reach.Waterpik Cordless Select Water Flosser review: VerdictIf you're looking for a compact, cordless water flosser then I'd recommend the Waterpik Cordless Select. It's quiet, lightweight, and offers seriously impressive cleaning for its size. It also comes with a useful number of tips, and, leaves your mouth feeling clean and refreshed.If you're looking for more cleaning power, however, then you might want to check out the Waterpik Whitening Professional Water Flosser, which is included in our best water flosser guide.Liked this?Do dentists recommend water flossers?Best cheap electric toothbrush dealsPrices - Waterpik Cordless Select Water Flosser▼ The Waterpik Cordless Select Water Flosser features a magnetic 4-hour rapid charging system, ultra quiet operation, waterproof design, and global voltage. It's perfect for small spaces, travel, and use in the shower. Removes up to 99.9% of plaque from treated areas and is up to 50% more effective for improving gum health vs. string floss. This model comes with 4 tips, 3 pressure settings, 360-degree tip rotation, global voltage, and a 2-year warranty. Waterpik® is the #1 water flosser brand in the world. Features 4 Water Flossing tips included 4-hour rapid charge Global voltage compatible; works with a Shaver socket USB charging system with magnetic attachment 2 pressure settings 45 Seconds of water capacity Extra-quiet design Waterproof and may be used in the shower Perfect for travel and small bathrooms 360-degree tip rotation Portable and lightweight Two-year warranty Benefits Clinically Proven Results: Effective Plaque Removal: Removes up to 99.9% of plaque from treated areas Healthier Gums: Up to 50% more effective than traditional string floss Ideal For Implants: Up To 2X as effective for improving gum health around implants vs. string floss using the Plaque Seeker® Tip Essential For Braces: Up to 3X as effective for removing plaque around braces vs. string floss using the Orthodontic Tip Removes plaque and debris deep between teeth and below the gumline where brushing and traditional flossing can't reach • Massages and stimulates gums to enhance circulation and keep your gums healthy • Leaves your mouth feeling incredibly fresh and clean • Great for people with implants, crowns, bridges, veneers and other dental work If you have seen or handled a cordless water flosser before, then the Cordless Select isn't any different. It has the typical look, shape and size. The flat base allows the unit to sit upright on a countertop. With the nozzle inserted it stands 29.2cm/11.5 inches tall. It is 6.3cm/2.5 inches wide and as is normal, it is quite deep. It has a depth of 8.9cm/3.5 inches. It isn't quite as deep as the Waterpik Aquarius. To be fair, it does look a little bit more modern than some of the other options. There is quite a clean and minimal look to the unit. This is a good thing I believe. On the front, there is a rounded rectangle panel that runs vertically down the upper third of the handle. Inside this is a single button, battery icon and LED. This button is both the power and mode button. With a very slight concave design to it, it does too have a power symbol printed on it. It is accented by a silver ring that runs around it. It is a plastic button, not silicone like you get on some other models. The button itself doesn't give lots of feedback to the fingertip, but it is passable. Below the button sits a battery icon. Underneath this is an LED that displays the battery information. It is not until we get to the very bottom of the unit that we are presented with a Waterpik logo. Underneath this, right on the bottom edge are 2 silver pins. It is through these that the NiMH battery that is sealed inside the handle, is recharged. More on this within the battery life section of the review. The right and left side of the flosser is free of any ports or controls. Although it is from the side you now see the transparent water tank that wraps into the side of the flosser. You do too see how it tapers to a thinner profile at the top of the flosser. This thinner profile is intentional to make it easier to hold onto. Looking at the rear of the unit, you have a textured surface, made up of raised dots, in the upper third of the handle. The rest is the water tank. The tank is removable and has a door on it, which allows you to refill it. At the top of the flosser, is where you will find the hole for the nozzle or jet tip if you prefer. 1 of the 4 supplied nozzles fits clips into the hole, located right in the centre. To release it, you press the button that sits to the side of this hole. You can't remove it unless you press this button. This top section of the unit has a cogwheel design to it. This is because it can be rotated a full 360 degrees. The rotation allows you to better control the angle and position of the water flow into the mouth. This is all good in principle. But, the design of the WF-10 I do believe works against this ease of use a little. I find this harder and more awkward to grip in hand than most other cordless water flossers. I am somewhat disappointed to have to say this. The thinner part of the flosser, which you usually grip to, is not as long as other units. There is a lack of surface area, which restricts the security in hand. Your grip is much more cramped. Yes, it is usable, but it is something I have noticed and is bugging me compared to other options. I am sure it will frustrate some others too. Models like the Cordless Advanced or Cordless Plus are much more comfortable to hold. As a cordless water flosser it does give you more flexibility than a corded unit. But, as you will likely be aware from the directions above, you still need to be near a sink to use it. This is because of the amount of water that is pushed into the mouth during use. You need a place to expel the water. The benefits of being cordless are great. I would suggest you consider your lifestyle. Take some time to assess whether a countertop flosser might be a better investment of your money. The water reservoir of the Cordless Select has a 207ml/7 ounce capacity. It can be removed for filling and for cleaning. You slide it on and off as you please. In most instances, I suspect you will fill it when it is attached. The reservoir door is easy to use and provides a secure seal. A full tank will last up to 60 seconds. The WF-10 offers 2 pressure settings or cleaning modes if you prefer. The default mode is a low pressure setting and there is too a high pressure option. The low mode empties the tank in 60 seconds, whilst the high mode takes 45. The pressure of the 2 modes are 45 and 75 PSI respectively. As soon as you press the power button, it activates the low power mode. Press it a second time to activate the high mode. A third press will turn the flosser off. It does not remember the last mode used. I find this a touch frustrating. It will always default to the lower power mode. This is a first world issue, I know. Low power mode is functional, but I know many prefer the more intense high mode. During use it produces up to 70 decibels and is quieter than some other models I have used. I have noticed a very small, but significant design tweak. Most water flossers have a flat base inside the tank. This means that most water gets sucked up. But, it can mean a small amount of residual water is left. This has been pretty much rectified with the Cordless Select. There is a tapering internally, which causes the water to pool neatly at the bottom of the tank. Thus, when emptied all the water is extracted. No residue left. Good work Waterpik. 4 nozzles come provided in the box. 2 x JT-450E - Waterpik Classic High Pressure Jet Tip1 x OD-100E - Waterpik Orthodontic Tip1 x PS-100E - Waterpik Plaque Seeker Tip For the vast majority, the classic tips are the best option to use. If you wear braces, then the Orthodontic tip is useful. Those with dental implants will find the Plaque Seeker tip most useful. There are 3 additional styles of nozzle. Each is designed for different use cases. PP-100E - Waterpik Pik Pocket TipsTB-100E - Waterpik Water Flosser Toothbrush TipsTC-100E - Waterpik Water Flosser Tongue Cleaner The Pik Pocket tips are designed for those with Periodontal Pockets. Any of these styles can be purchased and used with the Cordless Select WF-10. You can find more information on each of the different tips here. If you use the Classic tip, you should change this every 6 months on average. The other tips should be replaced every 3 months. All the nozzles can be rotated a full 360 degrees. When in use you can get the maximum benefit from the flosser and position the tip in the mouth at the ideal angle. The dial that controls this rotation is simple to use. Not quite as easy as the Cordless Advanced, but one of the best configurations I have used. A series of ridges around the edge of the rotating wheel make it easy for the finger to align and grip to. You can achieve quite finite control, with just 1 or 2 clicks of the wheel. Or you can easily make a much larger sweep of the fingertip to move it up to 180 degrees at a time. With as little as 2 passes of the finger, you can rotate the nozzle a full 360 degrees. Such a feature should not be underestimated. You have finite control, more so than when you are all fingers and thumbs with regular floss. It will take a bit of practice to actually do when in use. But you can use your index finger to twist the nozzle into the perfect angle to reach all areas of the mouth. You will have up to 60 seconds to clean your interdental spaces with the Cordless Select (subject to mode). Unlike an electric toothbrush, there is no timer/pacer built in to help you ensure an even clean. It will take a bit of trial and error to perfect the technique. If you have perfected your flossing technique you should manage it in this time. But, for some, the high powered mode might not offer quite enough using time and a refill may well be necessary. I wouldn't want a smaller water tank. It makes it tricky to complete a thorough clean on 1 fill of the tank. You have to refill. This is why I generally recommend staying away from models like the Fairywill 5020A. It has a reservoir capacity of 150ml. In fact, models like the 5020E are appealing because of their large 300ml tank. This does affect the size and weight. The WF-10 continues to function, even if the tank is drained of all the water. It will turn itself off after 2 minutes, but it will have long since drained the tank of any water. When the tank is empty, you will hear the sound change. You will also notice the lack of water being pushed against your teeth and gums. Although using a water flosser can be a little bit messy, I actually find it easier. This is compared to string dental floss and interdental brushes. It still requires a technique, but it feels a little easier to master. And I know I am not alone. I have learnt of many people who use a water flosser. Otherwise, they would not stick to an interdental cleaning regime otherwise. Dental professionals typically see the brushes as the 'best' option. They will advise a water flosser to be used in addition to these. Yet, almost all would prefer you use a water flosser instead of doing no interdental cleaning at all. Brushing alone leaves up to 40% of the tooth surface uncleaned. Water flossers like the Select have been clinically proven to remove plaque. There has been lots of research by Waterpik to show the effectiveness of their flossers. Impressive stats are available on the clinical research pages of the Waterpik website. A 2016 study found the water flosser to be 18% more effective than interdental brushes. The flow and pressure of the water reach bacteria deep between teeth and below the gumline. Brushing and traditional flossing can't always reach this. The water massages and stimulates the gums to improve circulation. This encourages your gums to be strong and healthy. I found that I preferred the more powerful setting of the 2 offered. Those with sensitive gums may find the lower power setting to be better. Countertop units do offer softer and more intense modes, but I don't think you necessarily need them. I use the water flosser before brushing and it is amazing how much debris it removes. And that is the stuff I can see! Using the flosser in this way feels like a clean of the mouth, even before you complete the brushing. A noteworthy point is that the Cordless Select has been designed as water resistant. If your preference is to use it in the shower, you can do so. A benefit of the cordless options is that they are more suitable for travel. Sadly, the Select does not come with a travel pouch in the box, which is disappointing. A concern I have is the size. The anticipation might be that this will fit nicely in a bag when I go away for business or pleasure. It will fit. But, if you are travelling light, say for a weekend break; this is a bulky unit to have in the bag. Overall the Cordless Select does the job it is designed to do. I like it, but there are a couple of small things that are for me frustrations. These are overcome with the Cordless Advanced from Waterpik.
